Use Case Descriptions

Place Order

Actors	Customer, Ext. Legacy Database, Credit Card Authenticator
Description	<p>The customer selects products from the catalog, adds them to the cart, inputs personal and payment information, and places orders.</p> <p>The product catalog is maintained by the Ext. Legacy Database.</p> <p>The system computes the total price, including shipping and handling charges. It then sends the payment information to the Credit Card Authenticator System. Waits for a response from Credit Card Authenticator System; if the transaction is successful the order status and product quantity are updated within the internal database. Otherwise, an error is displayed.</p>
Data	Part number, part weight, part price, quantity of part, customer name, customer email, customer mailing address, credit card information, order number.
Stimulus	The customer selects the operation.
Response	The order is added to the internal database.
Comments	

Manage Orders

Actors	Warehouse Employees
Description	The warehouse workers will print packing lists for completed orders, retrieve items from the warehouse, package the orders up, add a shipping label and invoice. Then the system sends an email to the customer saying the order has shipped.
Data	Customer name, customer email, customer mailing address, order-related data.
Stimulus	Upon order completion and when employee selects operation.
Response	Email confirmation to customer.
Comments	

Update Inventory

Actors	Receiving Desk Employee, Ext. Legacy Database
Description	The employee will add products to the inventory when delivered.
Data	Part number, part description, quantity of part.
Stimulus	Upon new inventory arrival and when employee selects operation.
Response	Inventory gets updated in the internal database.
Comments	

Set Shipping and Handling Charges

Actors	Administrator
Description	The administrator can set shipping and handling charges based on the weight of complete orders.
Data	Weight of orders.
Stimulus	Administrator selects operation.
Response	Shipping and handling charges get updated in the internal database.
Comments	

View Orders

Actors	Administrator
Description	The administrator can view all orders, these orders can be searched by date range, status, or price range. This also shows all details of a selected order.
Data	Order-related data.
Stimulus	Administrator selects operation.
Response	A report of the orders.
